

Build of opkg-key along with opkg(0.3.3)

we are trying to build opkg version 0.3.3 for raspberry-pi environment. I am able to build opkg successfully but with this build opkg-key utility is not generated.

I added gnupg and gpgme dependencies on RDEPENDS option of opkg_0.3.3.bb file but it did not work for us.

could you please let us know what configuration/dependency shall I add to build opkg-key along with opkg.

thanks.
