# Normal Thumbnail in RPI - RDK Camera - User Manual - 2020 - M6

- 1.1. Introduction
- 1.2. Environment Setup
- 1.3. Build Procedure
- 1.4. Image Flash Procedure
- 1.5. Normal Thumbnail Validation Procedure
- 1.6. Limitations

## 1.1. Introduction

Normal Thumbnail will get YUV data from RPI-0 camera device and it will convert YUV buffer into JPEG image based on openCV and then stored generated JPEG image in local /tmp directory . This page dedicated to bringing up and validation of Normal Thumbnail functionality in R-Pi Zero.

# 1.2. Environment Setup

Please refer below link for RPI-0 Environment setup

**RDK-C Environment Setup** 

# 1.3. Build Procedure

Please refer below link to build camera image

RDK-C Build Instructions for R-Pi

# 1.4. Image Flash Procedure

## Image Flash step

```
$ sudo dd if="Image Name" of="Device Name" bs=4M
Example:
```

sudo dd if=rdk-generic-camera-image\_default\_20200130060729.rootfs.rpi-sdimg of=/dev/sdb bs=4M

# 1.5. Normal Thumbnail Validation Procedure

### STEP 1:

Add require SSID and PSK in /etc/wpa\_supplicant.conf file in below format

network={

ssid="username"

psk="password"

}

#### Console output

```
ctrl_interface=/var/run/wpa_supplicant
ctrl_interface_group=0
update_config=1
network={
ssid="RDK"
psk="Comcast1"
}
```

## STEP 2:

Reboot the Target

After Reboot don't do step 1 and 2.

Note : Step 1 & 2 is only applicable for fresh target boot-up with new image.

#### STEP 3:

WiFi connection is needed to copy captured JPEG Image from /tmp directory into your PC.

Check WiFi connection by using below command.

#### ifconfig

#### Console output

root@raspberrypi0-rdk-camera:~# ifconfig					
lo	Link encap:Local Loopback				
	inet addr:127.0.0.1 Mask:255.0.0.0				
	inet6 addr: ::1/128 Scope:Host				
	UP LOOPBACK RUNNING MTU:65536 Metric:1				
	RX packets:87 errors:0 dropped:0 overruns:0 frame:0				
	TX packets:87 errors:0 dropped:0 overruns:0 carrier:0				
	collisions:0 txqueuelen:1000				
	RX bytes:4552 (4.4 KiB) TX bytes:4552 (4.4 KiB)				
wlan0	Link encap:Ethernet HWaddr B8:27:EB:2E:72:2B				
	inet addr:192.168.43.246 Bcast:192.168.43.255 Mask:255.255.255.0				
	UP BROADCAST RUNNING MULTICAST MTU:1500 Metric:1				
	RX packets:23 errors:0 dropped:0 overruns:0 frame:0				
	TX packets:44 errors:0 dropped:0 overruns:0 carrier:0				
	collisions:0 txqueuelen:1000				
	RX bytes:2893 (2.8 KiB) TX bytes:5887 (5.7 KiB)				

#### STEP 4:

check loaded module by using below command

Ismod

#### **Console output**

root@raspberrypi0-rdk-camera:~# lsmod							
Module	Size	Used by					
bcm2835_v412	40563	0					
v4l2_common	4809	1 bcm2835_v412					
videobuf2_vmalloc	6264	1 bcm2835_v412					
videobuf2_memops	1528	1 videobuf2_vmalloc					
videobuf2_v4l2	12640	1 bcm2835_v412					
videobuf2_core	27389	2 bcm2835_v412,videobuf2_v412					
videodev	154457	4 v4l2_common,videobuf2_core,bcm2835_v4l2,videobuf2_v4l2					
media	23307	1 videodev					
brcmfmac	258239	0					
brcmutil	7590	1 brcmfmac					
snd_bcm2835	21405	0					
cfg80211	492836	1 brcmfmac					
snd_pcm	79872	1 snd_bcm2835					
rfkill	19936	3 cfg80211					
snd_timer	20294	1 snd_pcm					
snd	52949	3 snd_timer, snd_bcm2835, snd_pcm					
lirc_rpi	6840	0					
lirc_dev	7533	1 lirc_rpi					
uio_pdrv_genirq	3469	0					
uio	8703	1 uio_pdrv_genirq					
fixed	2876	0					
sch_fq_codel	9662	2					
ірvб	384101	18					

#### STEP 5:

check camera device there or not by using below command

ls /dev/video0

```
Console output
```

root@raspberrypi0-rdk-camera:~# ls /dev/video0
/dev/video0

#### STEP 6:

check rdkcmediaserver( RMS ) binary is running or not.if it is running then we need to stop RMS binary running because we can't able to validate Normal Thumbnail while running RMS application.

Console output : RMS application running status						
	root@raspberrypi0-rdk-camera:~# ps -Af   grep rdkcmediaserver					
	root	659	1 22 10:24 ? 00:00:43 ./rdkcmediaserver/config/config.lua			
	root	4911	81 0 10:28 ttyS0 00:00:00 grep rdkcmediaserver			

if we get above status then need to do below step.

Console output : Stop RMS application

root@raspberrypi0-rdk-camera:~# systemctl stop rms-launcher

#### <u>STEP 7:</u>

Run normal\_thumbnail binary by using below command

#### Console output

```
root@raspberrypi0-rdk-camera:~# normal_thumbnail
```

## <u>STEP 8:</u>

Get JPEG image from local /tmp directory.

#### Console output

```
root@raspberrypi0-rdk-camera:~# cd /tmp/
root@raspberrypi0-rdk-camera:/tmp# ls thumbnail2020-06-28\:10\:33\:57..jpeg
thumbnail2020-06-28:10:33:57..jpeg
```

#### <u>STEP 9:</u>

Copy JPEG image from your RPI /tmp directory into your local PC.

## Console output xxxxxx@yyyyy-Lenovo-B480:~/THUMBNAIL\$ scp root@RPI\_DEVICE\_WIFI\_IP:/tmp/thumbnail\* . Example: xxxxxx@yyyyy-Lenovo-B480:~/THUMBNAIL\$ scp root@192.168.43.246:/tmp/thumbnail\* . thumbnail2020-06-28:10:33:57..jpeg 100% 16KB 16.4KB/s 00:00 xxxxxx@yyyyy-Lenovo-B480:~/THUMBNAIL\$

## 1.6. Limitations

Can't able to validate RMS( RDK Media Streamer ) and CVR( Continuous Video Recoding ) features while validating Normal Thumbnail feature.
