

Turris Omnia 2019 & 2020: Flashing Instruction

Hardware Information

[Wi-Fi Extender Reference Target](#)

Requirements

Two files are required to bring up Newer model of Turris Omnia (**Turris Omnia 2019 & Turris Omnia 2020**)[Revision: CZ11NIC23]

- Omnia Medkit image

- Compressed WIC image(Example: rdkb-generic-broadband-image_default_20200809095738.rootfs.wic.*) coming out of build [Turris Omnia RDKB Gateway: Yocto Build Instructions](#)

Extract *.wic.gz or *.wic.bz2 image and rename to sysupgrade.img. For example,

```
gunzip rdkb-generic-broadband-image_default_*.rootfs.wic.gz
(or)
bzip2 -d rdkb-generic-broadband-image_default_*.rootfs.wic.bz2

mv rdkb-generic-broadband-image_default_*.rootfs.wic sysupgrade.img
```

Flashing RDKB image (A Yocto Project based Distro)

Flashing with Medkit & Sysupgrade images

NOTE: This upgrade procedure wipes out eMMC flash storage(/dev/mmcblk0) completely. Earlier partitions are lost.

Perform following steps to flash New Turris Omnia with RDKB image.

- Connect a USB flash drive to PC that is running Linux. Create a partition in flash drive and format the partition with **mkfs.ext2**
- Copy both attached medkit image and *sysupgrade.img* image to USB flash drive.
- Disconnect other USB devices from the Turris Omnia and connect the flash drive to either USB port.
- Hold down the reset button (backside, bottom centre) and plug in the power cord. Wait until the fourth LED lights up (green), then release (before the 5th LED lights up). Please check [here](#) to see more detail on rescue modes.
- Wait approximately 2 minutes for the Turris Omnia to flash itself with the temporary image, during which LEDs will change multiple times.

Creating additional partitions

Create partitions for additional rootfs and nvram. Then, reboot the system.

```
root@TurrisOmnia-GW:~# fdisk /dev/mmcblk0

Welcome to fdisk (util-linux 2.28.1).
```

Changes will remain in memory only, until you decide to write them.
Be careful before using the write command.

Command (m for help): p
Disk /dev/mmcblk0: 7.3 GiB, 7818182656 bytes, 15269888 sectors
Units: sectors of 1 * 512 = 512 bytes
Sector size (logical/physical): 512 bytes / 512 bytes
I/O size (minimum/optimal): 512 bytes / 512 bytes
Disklabel type: dos
Disk identifier: 0xec7ceddc

Device	Boot	Start	End	Sectors	Size	Id	Type
/dev/mmcblk0p1	*	2048	34623	32576	15.9M	c	W95 FAT32 (LBA)
/dev/mmcblk0p2		34816	755359	720544	351.8M	83	Linux

Command (m for help): n
Partition type
p primary (2 primary, 0 extended, 2 free)
e extended (container for logical partitions)
Select (default p):

Using default response p.
Partition number (3,4, default 3):
First sector (34624-15269887, default 755712):
Last sector, +sectors or +size{K,M,G,T,P} (755712-15269887, default 15269887): +512M

Created a new partition 3 of type 'Linux' and of size 512 MiB.

Command (m for help): n
Partition type
p primary (3 primary, 0 extended, 1 free)
e extended (container for logical partitions)
Select (default e):

Using default response e.
Selected partition 4
First sector (34624-15269887, default 1804288):
Last sector, +sectors or +size{K,M,G,T,P} (1804288-15269887, default 15269887):

Created a new partition 4 of type 'Extended' and of size 6.4 GiB.

Command (m for help): n
All primary partitions are in use.
Adding logical partition 5
First sector (1806336-15269887, default 1806336):
Last sector, +sectors or +size{K,M,G,T,P} (1806336-15269887, default 15269887): +128M

Created a new partition 5 of type 'Linux' and of size 128 MiB.

Command (m for help): p
Disk /dev/mmcblk0: 7.3 GiB, 7818182656 bytes, 15269888 sectors
Units: sectors of 1 * 512 = 512 bytes
Sector size (logical/physical): 512 bytes / 512 bytes
I/O size (minimum/optimal): 512 bytes / 512 bytes
Disklabel type: dos
Disk identifier: 0xec7ceddc

Device	Boot	Start	End	Sectors	Size	Id	Type
/dev/mmcblk0p1	*	2048	34623	32576	15.9M	c	W95 FAT32 (LBA)
/dev/mmcblk0p2		34816	755359	720544	351.8M	83	Linux
/dev/mmcblk0p3		755712	1804287	1048576	512M	83	Linux
/dev/mmcblk0p4		1804288	15269887	13465600	6.4G	5	Extended
/dev/mmcblk0p5		1806336	2068479	262144	128M	83	Linux

Command (m for help): w
The partition table has been altered.
Calling ioctl() to re-read partition table.
Re-reading the partition table failed.: Device or resource busy

The kernel still uses the old table. The new table will be used at the next reboot or after you run partprobe

```
(8) or kpartx(8).  
  
root@TurrisOmnia-GW:~# reboot
```

Format newly created two partitions as **ext2** partitions.

```
root@TurrisOmnia-GW:~# mkfs.ext2 /dev/mmcblk0p3  
mke2fs 1.43 (17-May-2016)  
Discarding device blocks: done  
Creating filesystem with 131072 4k blocks and 32768 inodes  
Filesystem UUID: c2d8887f-6e6b-4d9b-b57a-f3bc28374841  
Superblock backups stored on blocks:  
        32768, 98304  
  
Allocating group tables: done  
Writing inode tables: done  
Writing superblocks and filesystem accounting information: done  
  
root@TurrisOmnia-GW:~# mkfs.ext2 /dev/mmcblk0p5  
mke2fs 1.43 (17-May-2016)  
Discarding device blocks: done  
Creating filesystem with 131072 1k blocks and 32768 inodes  
Filesystem UUID: 2e4cee8d-f1d5-488a-99f9-5e3a233dcf4f  
Superblock backups stored on blocks:  
        8193, 24577, 40961, 57345, 73729  
  
Allocating group tables: done  
Writing inode tables: done  
Writing superblocks and filesystem accounting information: done
```

RDK Firmware(Image) upgrade: (Yet to validate)

Approach 1:

RDK firmware upgrade with XConf server: [Firmware upgrade through XCONF server - Turris-Omnia - User Manual - 2020 - M6](#)

Approach 2(Quick):

Copy zImage , dtb file and rootfs files(not ***dbg* rootfs file**) from PC or VM to /tmp/ directory of Turris Omnia which runs RDK Image.

For example

```
scp zImage--4.14.22-r0-turris-20200720105910.bin root@<TurrisOmnia-IP>:/tmp/  
scp armada-385-turris-omnia.dtb root@<TurrisOmnia-IP>:/tmp/  
scp rdkb-generic-broadband-image_default_20200720105910.rootfs.tar.gz root@<TurrisOmnia-IP>:/tmp/
```

In Turris Omnia, execute `/lib/rdk/TurrisFwUpgrade.sh` to flash new RDK image present in /tmp folder

```
sh /lib/rdk/TurrisFwUpgrade.sh
```

Turris Omnia will now run upgraded version of Yocto based RDK image.
