"Connection timed out" errors whilst cloning repos from code.rdkcentral.com via ssh

Example:

https://code.rdkcentral.com/r/plugins/gitiles/manifests

I have uploaded the public part of my ssh key to my profile on code.rdkcentral.com, but if I try to clone this repo via ssh I see this:

```
$ time git clone ssh://steve.turner@code.rdkcentral.com:29418/manifests
Cloning into 'manifests'...
ssh: connect to host code.rdkcentral.com port 29418: Connection timed out
fatal: Could not read from remote repository.

Please make sure you have the correct access rights
and the repository exists.

real    8m43.752s
user    0m0.003s
sys     0m0.000s
```

The same error occurs for all other repos that I've tried. Is there a known issue with ssh traffic to code.rdkcentral.com? Cloning via https is OK.
