

# SecurityAgent and Thunder Security Integration in RPi

Refer [Thunder Security](#) page to understand the basics of ThunderSecurity module and SecurityAgent plugin and its purpose and functionality. This page is intended to cover integration and validation of these modules in RPi CMF stack.

**Code change to enable SecurityAgent plugin.**

**meta-layer path:**

```

**RFC Support.**

Thunder Security can be enabled/disabled using RFC Device.DeviceInfo.X\_RDKCENTRAL-COM\_RFC.Feature.ThunderSecurity.Enable.

Set ThunderSecurity to true with below command.

**tr181 -s -t boolean -v true Device.DeviceInfo.X\_RDKCENTRAL-COM\_RFC.Feature.ThunderSecurity.Enable**

Get the setted value with below command.

**tr181 Device.DeviceInfo.X\_RDKCENTRAL-COM\_RFC.Feature.ThunderSecurity.Enable**

**Note:** RPi needs to be rebooted after changing the RFC value.

**Ex:**

```
login as: root
root@raspberrypi-rdk-mc:~#
root@raspberrypi-rdk-mc:~#
root@raspberrypi-rdk-mc:~#
root@raspberrypi-rdk-mc:~#
root@raspberrypi-rdk-mc:~#
root@raspberrypi-rdk-mc:~# tr181 -s -t boolean -v true Device.DeviceInfo.X_RDKCENTRAL-COM_RFC.Feature.ThunderSecurity.Enable
root@raspberrypi-rdk-mc:~# tr181 Device.DeviceInfo.X_RDKCENTRAL-COM_RFC.Feature.ThunderSecurity.Enable
true
root@raspberrypi-rdk-mc:~#
```

From Wpeframework logs we could see **Security ENABLED, incoming requests need to be authorized!!!** And ThunderSecurity value = true.

```

```

We can get Security token with running of **WPEFrameworkSecurityUtility** binary.

```
root@raspberrypi-rdk-mc:/usr/bin# ./WPEFrameworkSecurityUtility
{"token":"eyJhbGciOiJIUzI1NiIsInR5cCI6IkpXVCJ9.aHR0cDovL2xvY2FsaG9zdA.aFpBz8A603aUJsQmITpNY64eqCcFZu08Sk0GUqz5voo","success":true}
```

Ex:

192.168.43.11 - PuTTY

```
root@raspberrypi-rdk-mc:~# cd /usr/bin/
root@raspberrypi-rdk-mc:/usr/bin# ./WPEFrameworkSecurityUtility
{"token":"eyJhbGciOiJIUzI1NiIsInR5cCI6IkpXVCJ9.aHR0cDovL2xvY2FsaG9zdA.aFpBz8A603aUJsQmITpNY64eqCcFZu08Sk0GUqz5voo","success":true}
root@raspberrypi-rdk-mc:/usr/bin#
```

To validate of **SecurityAgent** plugin need to use **Security** token with curl command as below.

**curl command :**

```
curl -H "Content-Type: application/json" -H "Authorization: Bearer eyJhbGciOiJIUzI1NiIsInR5cCI6IkpXVCJ9.aHR0cDovL2xvY2FsaG9zdA.aFpBz8A603aUJsQmITpNY64eqCcFZu08Sk0GUqz5voo" -X POST -d '{"jsonrpc": "2.0", "id": 1234567890, "method": "SecurityAgent.1.validate", "params": {"token": "eyJhbGciOiJIUzI1NiIsInR5cCI6IkpXVCJ9.aHR0cDovL2xvY2FsaG9zdA.aFpBz8A603aUJsQmITpNY64eqCcFZu08Sk0GUqz5voo"}}' http://127.0.0.1:9998/jsonrpc
```

**Response :**

```
{ "jsonrpc": "2.0", "id": 1234567890, "result": { "valid": true } }
```

Ex:

```
root@raspberrypi-rdk-mc:~# curl -H "Content-Type: application/json" -H "Authorization: Bearer eyJhbGciOiJIUzI1NiIsInR5cCI6IkpXVCJ9.aHR0cDovL2xvY2FsaG9zdA.aFpBz8A603aUJsQmITpNY64eqCcFZu08Sk0GUqz5voo" -X POST -d '{"jsonrpc": "2.0", "id": 1234567890, "method": "SecurityAgent.1.validate", "params": {"token": "eyJhbGciOiJIUzI1NiIsInR5cCI6IkpXVCJ9.aHR0cDovL2xvY2FsaG9zdA.aFpBz8A603aUJsQmITpNY64eqCcFZu08Sk0GUqz5voo"}}' http://127.0.0.1:9998/jsonrpc
{"jsonrpc": "2.0", "id": 1234567890, "result": { "valid": true }}root@raspberrypi-rdk-mc:~#
```

Here Manually changed the security token to wrong and expected result should be false.

**Curl command :**

```
root@raspberrypi-rdk-mc:~# curl -H "Content-Type: application/json" -H "Authorization: Bearer eyJhbGciOiJIUzI1NiIsInR5cCI6IkpXVCJ9.aHR0cDovL2xvY2FsaG9zdA.aFpBz8A603aUJsQmITpNY64eqCcFZu08Sk0GUqz5voo" -X POST -d '{"jsonrpc": "2.0", "id": 1234567890, "method": "SecurityAgent.1.validate", "params": {"token": "eyJhbGciOiJIUzI1NiIsInR5cCI6IkpXVCJ9.aHR0cDovL2xvY2FsaG9zdA.aFpBz8A603aUJsQmITpNY64eqCcFZu08Sk0GUqz5voK"}}' http://127.0.0.1:9998/jsonrpc
```

**Response :**

```
{ "jsonrpc": "2.0", "id": 1234567890, "result": { "valid": false } }
```

**setCurrentResolution with Security** token.

**Curl command:**

```
curl -H "Content-Type: application/json" -H "Authorization: Bearer eyJhbGciOiJIUzI1NiIsInR5cCI6IkpXVCJ9.aHR0cDovL2xvY2FsaG9zdA.aFpBz8A603aUJsQmITpNY64eqCcFZu08Sk0GUqz5voo" -X POST -d '{"jsonrpc": "2.0", "id": 42, "method": "org.rdk.DisplaySettings.1.setCurrentResolution", "params": {"videoDisplay": "HDMI0", "resolution": "1080p", "persist": true}}' http://127.0.0.1:9998/jsonrpc
```

**Response:**

```
{ "jsonrpc": "2.0", "id": 42, "result": { "success": true } }
```

Ex:

192.168.43.11 - PuTTY

```
root@raspberrypi-rdk-mc:~# curl -H "Content-Type: application/json" -H "Authorization: Bearer eyJhbGciOiJIUzI1NiIsInR5cCI6IkpXVCJ9.aHR0cDovL2xvY2FsaG9zdA.aFpBz8A603aUJsQmITpNY64eqCcFZu08Sk0GUqz5voo" -X POST -d '{"jsonrpc": "2.0", "id": 42, "method": "org.rdk.DisplaySettings.1.setCurrentResolution", "params": {"videoDisplay": "HDMI0", "resolution": "1080p", "persist": true}}' http://127.0.0.1:9998/jsonrpc
{"jsonrpc": "2.0", "id": 42, "result": { "success": true }}root@raspberrypi-rdk-mc:~#
```

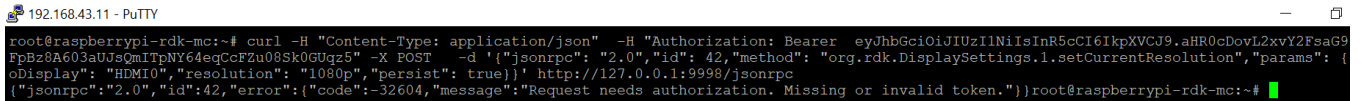

Here Manually changed the security token to wrong and expected result should be **Request needs authorization. Missing or invalid token.**

**Curl command:**

```
curl -H "Content-Type: application/json" -H "Authorization: Bearer eyJhbGciOiJIUzI1NiIsInR5cCI6IkpXVCJ9.aHR0cDovL2xvY2FsaG9zdA.  
aFpBz8A603aUJsQmITpNY64eqCcFZu08Sk0GUqz5" -X POST -d '{"jsonrpc": "2.0", "id": 42, "method": "org.rdk.DisplaySettings.1.setCurrentResolution",  
params": {"videoDisplay": "HDMI0", "resolution": "1080p", "persist": true}}' http://127.0.0.1:9998/jsonrpc
```

**Response:**

```
{"jsonrpc": "2.0", "id": 42, "error": {"code": -32604, "message": "Request needs authorization. Missing or invalid token."}}root@raspberrypi-rdk-mc:/usr/bin#
```

A screenshot of a terminal window titled "192.168.43.11 - PuTTY". The terminal shows a root user at a raspberrypi-rdk-mc machine. A curl command is executed, sending a JSON-RPC request to http://127.0.0.1:9998/jsonrpc. The response is a JSON object indicating an error: {"code": -32604, "message": "Request needs authorization. Missing or invalid token."}.

```
root@raspberrypi-rdk-mc:~# curl -H "Content-Type: application/json" -H "Authorization: Bearer eyJhbGciOiJIUzI1NiIsInR5cCI6IkpXVCJ9.aHR0cDovL2xvY2FsaG9  
FpBz8A603aUJsQmITpNY64eqCcFZu08Sk0GUqz5" -X POST -d '{"jsonrpc": "2.0", "id": 42, "method": "org.rdk.DisplaySettings.1.setCurrentResolution", "params": {  
oDisplay": "HDMI0", "resolution": "1080p", "persist": true}}' http://127.0.0.1:9998/jsonrpc  
{"jsonrpc": "2.0", "id": 42, "error": {"code": -32604, "message": "Request needs authorization. Missing or invalid token."}}root@raspberrypi-rdk-mc:~#
```

**Ex:**
