

WebPA set up on RHEL OS

Hi Team,

I'm following this page (https://developer.rdkcentral.com/tools/documentation/webpa/webpa_xmidt_reference_setup/) and here the system requirement for Operating System mentioned as Centos 7.6.

Can we set up WEbPA cluster on RHEL OS? If yes, please share the instruction or document link to follow?

If no, please let us know the reason?
