

RDK-C Code Releases

The generic RDK-C components are accessible via RDKM CMF Gerrit and reflect the most recent contributions from both Comcast development and the community. On a periodic basis, the repositories are baselined and those baselines are made available. The baselined code will be built and tested by RDK-M CMF and made available for download along with appropriate documentation including a readme, component manifest, user guides and test results. Community members can fetch the baselined code from RDKM CMF Gerrit and work with it.

Because these baselines are cut from the head of development, you may find some defects. Please refer to the documentation available with the baseline for more information.

If you would like to receive email notification for RDK Code Release announcements, please click [here](#)
