RDK 2.0 Logger - "SEPARATE.LOGFILE.SUPPORT" Support

Hello,

According to RDK Logger page, it seems that RDK 2.0 Logger supports to separates logs into separate files based on "SEPARATE.LOGFILE.SUPPORT" configuration variable.

However, the current RDK Logger(RDK 2.0 Release and the latest version) does not support the feature yet.

Could you let us know whether the feature "SEPARATE.LOGFILE.SUPPORT" will be supported in the next Generic RDK Release or not?

If there is a plan to support it, does it support to limit the maximum size of separate log files like the log4c rollingfile appender?

Thanks,

Junho
