

Does RDK DLNA support file inside USB streaming

I can transfer the file recorded by recorder by following the parameter RDK formulate like http://10.118.202.162:8081/vidms/dvr?rec_id=2017092917&segmentId=0

But I don't know how to transfer the file in same way, I see `MediaUrl.cpp` under `rmfstreamer` directory, this function `bool MediaUrl::is_file_media()` is not implemented yet

Can anyone answer it
