

# ERROR: QA Issue: rmfstreamer: Files/directories were installed but not shipped in any package:

Dear all sirs:

Using bitbake rdk-generic-hybrid-image and add some lines in T:\17.1\_build\_6\_415\meta-rdk\recipes-extended\mediastreamer\rmfstreamer\_git.bb.

The following error always happen, please kindly advise. Thanks so much.

Is there a way I can ship more files when building an out of tree kernel module?

1. Add some lines in do\_install\_append()
  - a. `install -d ${D}/opt`  
`install -m 0644 ${WORKDIR}/vidiPathEnabled ${D}/opt/`  
  
`install -m 0644 ${WORKDIR}/rmfconfig.ini ${D}${sysconfdir}/`  
`install -d ${D}/usersettings`  
`install -m 0644 ${WORKDIR}/TunerConfig ${D}/usersettings/`
2. ERROR: QA Issue: rmfstreamer: Files/directories were installed but not shipped in any package:

/usersettings  
/opt  
/usersettings/TunerConfig  
/opt/vidiPathEnabled

Please set FILES such that these items are packaged. Alternatively if they are unneeded, avoid installing them or delete them within do\_install.

rmfstreamer: 4 installed and not shipped files.

ERROR: QA run found fatal errors. Please consider fixing them.

ERROR: Function failed: do\_package\_qa

ERROR: Logfile of failure stored in: /home/jack/17.1\_build\_6\_415/build-brcm97271ip-refboard/tmp/work/cortexa15t2hf-vfp-neon-rdk-linux-gnueabi/rmfstreamer/rdkv-20170417+gitrdkv-20170417-r0/temp/log.do\_package.14707

ERROR: Task 1716 (/home/jack/17.1\_build\_6\_415/meta-rdk/recipes-extended/mediastreamer/rmfstreamer\_git.bb, do\_package) failed with exit code '1'

Best regards

Jack
