# Xconf Open Source

Xconf-OSS is an open source device configuration application. It is a web / API call based application, where users can configure different firmware rules, templates and configuration for different Set Top Boxes (STB) with different MAC address, environment and model. It is a platform for technicians to define different MAC list, Environments and Models to associate them to different Firmware Rules and Configuration.

At the present xconf-oss has following submodules

Xconf OSS is Primary composed of two different applications

- Xconf-Angular-admin (UI)
- Xconf-dataservice
