

How to use DLNA dtcpenc/dtcpdec element in gstreamer?

Dear RDK team,

As we would like to decrypt dlina video from DMS, follow <https://wiki.rdkcentral.com/display/RDK/DTCP>

to enable dtcp-ip not works but it seems enable in gstreamer :

```
$ gst-inspect-1.0 | grep dtcp
dtcpdec: dtcpdec: DTCP Decryption
dtcpenc: dtcpenc: DTCP Encryption
```

Is there any example for gstreamer to enc/dec media file?
