RDK-B_2.1-20160808

This is the summary page that describes the CMF RDK-B release 2.1-20160808.

Baseline

Baseline	CMF-20160808	2016-08-08 baseline.
Post-baseline updates		
ТDК	M38	https://rdkwiki.com/rdk/display/TDK/TDK-B+Release+01
Manifest	rdkb-2.1-20160808	

Highlights since 2.1-20160620

- New components: None.
- Components updated:
 - CcspCMAgent, CcspCommonLibrary, CcspCr, CcspLMLite, CcspPandM, CcspPsm, CcspSnmpPa, CcspTr069Pa, CcspWecbController, CcspWifiAgent, GwProvApp, TestAndDiagnostic, Utopia, hal, hotspot, webui, rdk-oe.
- Patches updated: None.
- Community contributions (CODEMGMT-171): None.

Getting the code

- \$ mkdir rdkb
- \$ cd rdkb
- \$ repo init -u https://code.rdkcentral.com/r/manifests -m rdkb.xml -b rdkb-2.1-20160808
- \$ repo sync -j4 --no-clone-bundle
 - The -m rdkb.xml in the build sequence above is important. If this is not specified, you will get an RDK-V tree by default.
 - The -b rdkb-2.1-20160808 in the build sequence above specifies the branch to use. If you omit the -b rdkb-2.1-20160808 entirely, you will get the master (HEAD) of each component.
 - At any time, the community can build latest master by dropping the -b rdkb-2.1-20160808 option in the repo init command.
 - We have verified that this iteration boots to a login prompt and that you can log in, and that you can connect with a web browser to the web admin page, but that is the extent of the testing at this time.

Building the code

\$ source meta-cmf-rdkb-bsp-emulator/setup-environment (select qemux86broadband)

\$ bitbake rdk-generic-broadband-image

The image path will be: build-qemux86broadband/tmp/deploy/images/qemux86broadband/rdk-generic-broadband-image-qemux86broadband.vmdk

Building TDK

Follow the steps as for a normal build, above, but use the following bitbake command:

\$ bitbake rdk-generic-broadband-tdk-image

The image path will be: build-qemux86broadband/tmp/deploy/images/qemux86broadband/rdk-generic-broadband-tdk-image-qemux86broadband.vmdk

TDK for RDK-B documentation is available: https://rdkwiki.com/rdk/display/TDK/TDK-B+Release+01

Running the emulator

- 1. Start VirtualBox.
- 2. Click New -> Enter name -> Select type Linux -> Select version Other Linux (32 bit) -> Click Next
- 3. Select Memory size 512MB -> Click Next
- 4. Select option Use an existing virtual hard drive -> Select the built image above -> Click Create
- 5. Once the VM has been created, select the new image and click Settings -> Network -> Select Attached to: 'Bridged Adapter' -> Click Ok
- 6. Click Start. This will bring up the emulator with the initial splash screen

Known Issues

• None.
