CMF code iteration 3 available

RDK-2.0-20141024, the 3rd CMF iteration (RDK development code snapshot) is now available.

CMF Iterations are (approximately) bi-weekly snapshots of the RDK development tree and reflect recent contributions from both Comcast development and the community. The code is built and tested (with TDK) by CMF and made available for download along with appropriate documentation and test results. Note that, since iterations are snapshots of the development trunk, you may find some defects. Please refer to the documentation available with the iteration for more information.

To set up your environment, please follow the tutorial, Getting Started with the Code. All of the information you'll need to work with the code is available in the documentation accompanying the iteration.

Details of all CMF iterations can be found on the following page:

- CMF Iterations
