RDK 2.0 Hardware Availability

Couple questions related to the Hardware Development platform for RDK 2.0.

1. Can you provide the HDP availability date supporting the North American version of RDK 2.0?
2. Can you provide the HDP availability date supporting RDK 2.0 with a DVB tuner?
3. If you are unable to provide dates at this time, should I assume the HDP availability timing will have a similar schedule compared to version 1.3. In this case, the software was available on July 17 (IO1), while the hardware availability was October 1. Therefore, should we assume a 10 week delay for the hardware after the release of the software components? Or will the RDK group attempt to align both the hardware and software releases?

Thanks
