

RDK 2.0 delivery still refers to OCAP

Nice to see RDK 2.0 delivered.

I'm a bit surprised to see that OCAP is still mentioned in the Hybrid porting guide.

So does it mean that currently, there are 2 ways to build a RDK 2.0 software, when want to deal with a QAM input ?

with a first solution through OCAP (US cable) and second solution with RMF ?

And a resulting question: is the RMF solution reliable today ?
