Updated CEF Browser/2.2 timeline?

I have a bug or two that I've tried quite a few workarounds to solve, and I can't seem to solve them. However, I'm told the Chromium CEF browser will fix them. I was curious if there was a timeline for that (as a software engineer, I won't hold you to it 😉), and if there was a specific 'release' that it might be appearing in.

Thank you in advance,

David
